

DESCRIPTION

libhtml is a minimal, open source (ISC-licensed) C library for parsing, serialising, and manipulating HTML-4.01-strict and XHTML-1.0-strict documents. You may enjoy this library if you're interested in tight correctness of input and output data.

Why? The predominant open source HTML parser, **libxml** , is enormous and complicated. For our needs, we wanted a small, strongly-validating parser focussing only on strict HTML.

The **libhtml** library is a **BSD.lv Project** member.

SOURCES

Sources correctly build and install on OpenBSD, NetBSD, and GNU/Linux operating systems, tested variously on generic i386, AMD64, and DEC Alpha. The current version is **0.3.3**.

Download

Current source	libhtml.tar.gz (md5)
Archived source	/archive
On-line source	cvsweb

DOCUMENTATION

The manual is generated automatically and refers to the current snapshot. Examples are distributed with the source package.

html(3)	simple HTML parsing library
test.c	example interfacing utility

CONTACT

NEWS

12-07-2011: version 0.3.3

Fixed **hnode_dechildpart** logic.

05-04-2011: version 0.3.2

Pushed commonly-used *struct iofd* into library with the **iofd_close**, **iofd_getchar**, **iofd_open**, and **iofd_rew** functions. Also added **iostdout_putchar** and **iostdout_puts** convenience functions.

05-02-2011: version 0.3.1

Reviving project. Added some helper functions and cleaned up manual.

See [cvsweb](#) for historical notes.
